

## Mazda Part Number Format – Quick Guide

Mazda’s part number is formatted as shown below. Dashes are shown when the part number must be read by humans. Dashes are **NOT** included in EDI data or bar codes.

If the part has a blank revision (engineering) level, but also has a color code, it **MUST** have a blank in the 10<sup>th</sup> position. Also, if there is no value in positions 10, 11, or 12, of the part number then spaces must be inserted for bar code and check digit creation.

**NOTE: BE SURE TO REVIEW APPENDIX E, SECTION 3 OF OUR GUIDE (LINK BELOW) FOR DETAILED PART NUMBER SPECIFICATIONS**
